

ROBYRAIL

New RobyRail permanently installed at Dynamo Stadium in Minsk, Belarus

ABOUT ROBYRAIL

In-house designed high-speed straight track system RobyRail available in various modifications is a perfect solution to achieve dynamic moving shots. With fast acceleration the system can achieve speeds of about 13 m/s. The system is built around our modern direct-drive R3 gyro-stabilized heads line, but works well with the heads of other manufacturers too. RobyRail uses the narrow monorail profile thus requiring a minimum footprint on the ground when rigged.

The system supports automated moves, borders and presets. It can also work either with cable carrier or wireless transmission.

ROBYRAIL SYSTEM FEATURES

Single and double-headed dollies	Fiber-optic transmission and power to the dolly through the cable carrier system
Robyhead R3 or third-party heads supported	
13 m/s speed	Operator controlled or pre-defined dolly movement
Compact monorail profile	
Integrated automated safety stops	High accuracy of borders presets
