

# REFCAM

## ABOUT REFCAM

Our Refcam is a universal solution consisting of a mini-camera, specially designed camera mount and IMT / Dragonfly wireless camera transmitter. The camera can be easily attached and de-attached to/from any helmet, allowing referees to use personal gears they are used to. The whole kit weighs only 190 g and is perfectly balanced on the helmet without wires, thereby eliminating any discomfort for the user.

Refcam can be mounted on most helmets, including those used in hockey, horseracing, and football. This POV system also bears the possibilities of being arranged as a wearable chest- or ear- cam solution. Battery charge can last up to several hours and the battery compartments allow easy replacement of the battery during the game breaks. During the operations, the camera is remotely controlled by RCP placed in the OB-VAN that comes along with the kit.

By providing a unique visual experience Refcam stands out as a perfect tool to brings viewers closer.
